THE NATIONAL BUREAU OF STANDARDS

The National Bureau of Standards is a principal focal point in the Federal Government for assuring maximum application of the physical and engineering sciences to the advancement of technology in industry and commerce. Its responsibilities include development and maintenance of the national standards of measurement, and the provisions of means for making measurements consistent with those standards; determination of physical constants and properties of materials; development of methods for testing materials, mechanisms, and structures, and making such tests as may be necessary, particularly for government agencies; cooperation in the establishment of standard practices for incorporation in codes and specifications; advisory service to government agencies on scientific and technical problems; invention and development of devices to serve special needs of the Government; assistance to industry, business, and consumers in the development and acceptance of commercial standards and simplified trade practice recommendations; administration of programs in cooperation with United States business groups and standards organizations for the development of international standards of practice; and maintenance of a clearinghouse for the collection and dissemination of scientific, technical, and engineering information. The scope of the Bureau's activities is suggested in the following listing of its three Institutes and their organizational units.

Institute for Basic Standards. Applied Mathematics. Electricity. Metrology. Mechanics. Heat. Atomic Physics. Physical Chemistry. Laboratory Astrophysics.* Radiation Physics. Radio Standards Laboratory.* Radio Standards Physics; Radio Standards Engineering. Office of Standard Reference Data.

Institute for Materials Research. Analytical Chemistry. Polymers. Metallurgy. Inorganic Materials. Reactor Radiations. Cryogenics.* Materials Evaluation Laboratory. Office of Standard Reference Materials.

Institute for Applied Technology. Building Research. Information Technology. Performance Test Development. Electronic Instrumentation. Textile and Apparel Technology Center. Technical Analysis. Office of Weights and Measures. Office of Engineering Standards. Office of Invention and Innovation. Office of Technical Resources. Clearinghouse for Federal Scientific and Technical Information.**

*Located at Boulder, Colorado, 80301.

**Located at 5285 Port Royal Road, Springfield, Virginia, 22171.

NBS REPORT

9058

PRELIMINARY SUBJECT AND AUTHORS INDEX TO COMPILATIONS OF DATA ON PROPERTIES OF MATERIALS

by

J. G. Beckerley
Optical Materials, Inc.
Cambridge, Mass.

Prepared for:

Office of Standard Reference Data
National Standard Reference Data System
Under Contract CST-1321

DTIC QUALITY INSPECTED 2

IMPORTANT NOTICE

NATIONAL BUREAU OF STANDARDS REPORTS are usually preliminary or progress accounting documents intended for use within the Government. Before material in the reports is formally published it is subjected to additional evaluation and review. For this reason, the publication, reprinting, reproduction, or open-literature listing of this Report, either in whole or in part, is not authorized unless permission is obtained in writing from the Office of the Director, National Bureau of Standards, Washington, D.C. 20234. Such permission is not needed, however, by the Government agency for which the Report has been specifically prepared if that agency wishes to reproduce additional copies for its own use.

U.S. DEPARTMENT OF COMMERCE
NATIONAL BUREAU OF STANDARDS

INTRODUCTION

The present report is intended for use in conjunction with NBS Report 9057, "Preliminary List of References Containing Compilations of Data on Properties of Materials". It has been bound separately as a convenience to the user, in order to reduce the need for page turning. The coverage of the two reports is identical.

As indicated in the Introduction to NBS 9057, this bibliography is being prepared as a preliminary phase of a more extensive effort, namely, the listing and indexing according to property of all significant compilations of data on the properties of materials. Ultimately the publication of this material in final form will represent an important first step in the organization of the National Standard Reference Data System. Meanwhile, the material is being distributed in this preliminary form in order to elicit comments and criticism.

The preliminary nature of this report may be emphasized by noting that it is not complete, that in particular many older references have been omitted, and that in some of the references, gaps in the information have been left to be filled later. Where two or more editions of a reference exist, only the most recent has been listed.

Of the two parts of this report, the first is a preliminary subject index, prepared by rapid scanning of titles. It is expected that the final version of this material will include an extensive index according to physical properties.

The second part is a name index of authors, editors, translators and, in a few cases, corporate sponsors.

Corrections and suggestions will be appreciated.
